

Java Internship Project Report

Student: Khushboo Sharma

Branch: B.Tech - Computer Science & Engineering

Project Overview

This report summarizes the Java internship tasks completed using object-oriented programming concepts and core Java.

Task 1: Student Management System

Implemented a console-based Student Management System using arrays, loops, conditional statements, methods, and user input to manage student records.

Task 2: Object-Oriented Programming Concepts

Implemented Java programs demonstrating: Class and Object Inheritance Polymorphism Abstraction Encapsulation

Task 3: Java Programs

Created separate Java programs to demonstrate fundamental OOP concepts and improve understanding of reusable, modular programming.

Technologies Used

Java, Visual Studio Code, JDK, Terminal/Command Prompt.

Learning Outcomes

Developed practical skills in Java programming, OOP principles, problem solving, modular coding, and console application development.

Conclusion

The internship tasks strengthened knowledge of Core Java and object-oriented programming while providing hands-on development experience.
